

"2015 MCR CONVENTION DECALS ALERT"-- While preparing the N-scale Buffalo Trace cars for the Company Store, I noticed that the black ink on the decals has a tendency to flake off while you are handling and cutting them. I am assuming this would be true of the O-scale decals. It is suggested that the decals be clear-coated (Testors Dull-cote or Semi-Gloss?) before handling or cutting them. I did not notice any flaking of the colored inks (green or red). Just the black ink seemed to be flaking."
